

AFAQ for Energy & Integrated Business

Innovating today, sustaining tomorrow.

Solar power and energy storage in the Sultanate of Oman

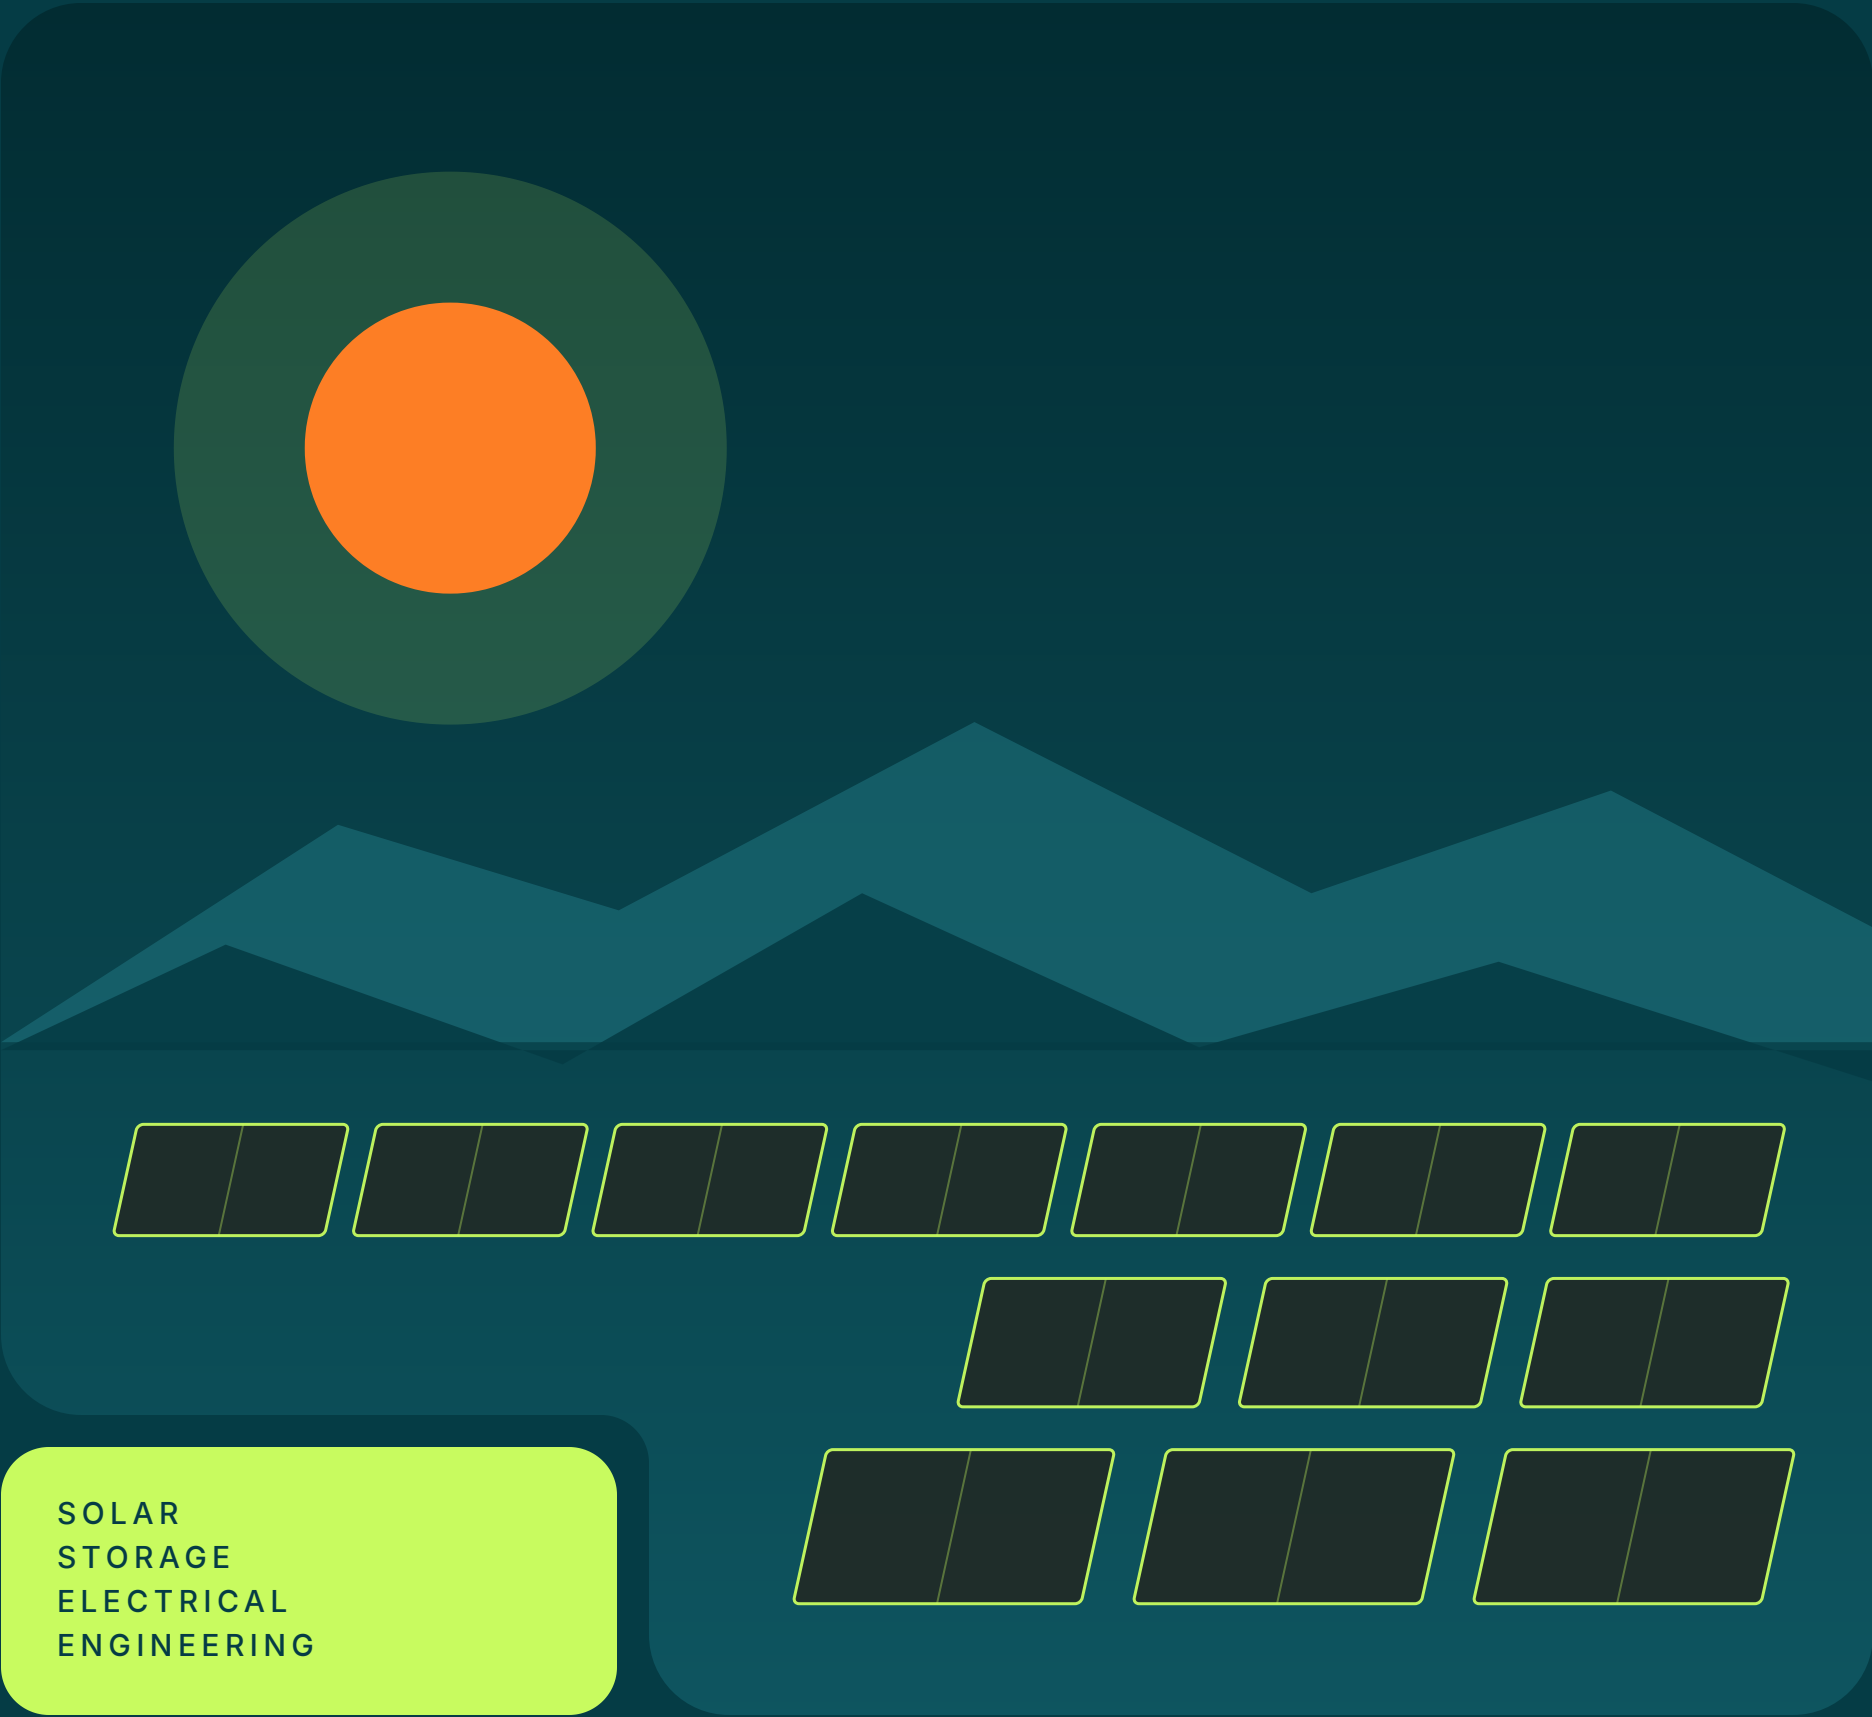

About AFAQ

AFAQ for Energy & Integrated Business is an Omani company based in Muscat. It works in solar power, energy storage and the electrical systems that go with them.

The company designs photovoltaic systems, supplies their components, installs them and brings them into operation, at sizes ranging from building systems to project plants.

AFAQ works directly with facility owners, and with contractors and developers inside their own projects.

System components

A photovoltaic system is built from four components. AFAQ holds a direct supply agreement with a main supplier for each.

01

PV modules

Selected according to the mounting area available and the conditions on site.

MAIN SUPPLIERS
AACE · Ronma

02

Battery energy storage

Sized on the loads to be covered and the autonomy required.

MAIN SUPPLIER
Goshin

03

Inverters and power conversion

Selected according to the array configuration and the connection requirements of the grid operator.

MAIN SUPPLIER
Star Charge

04

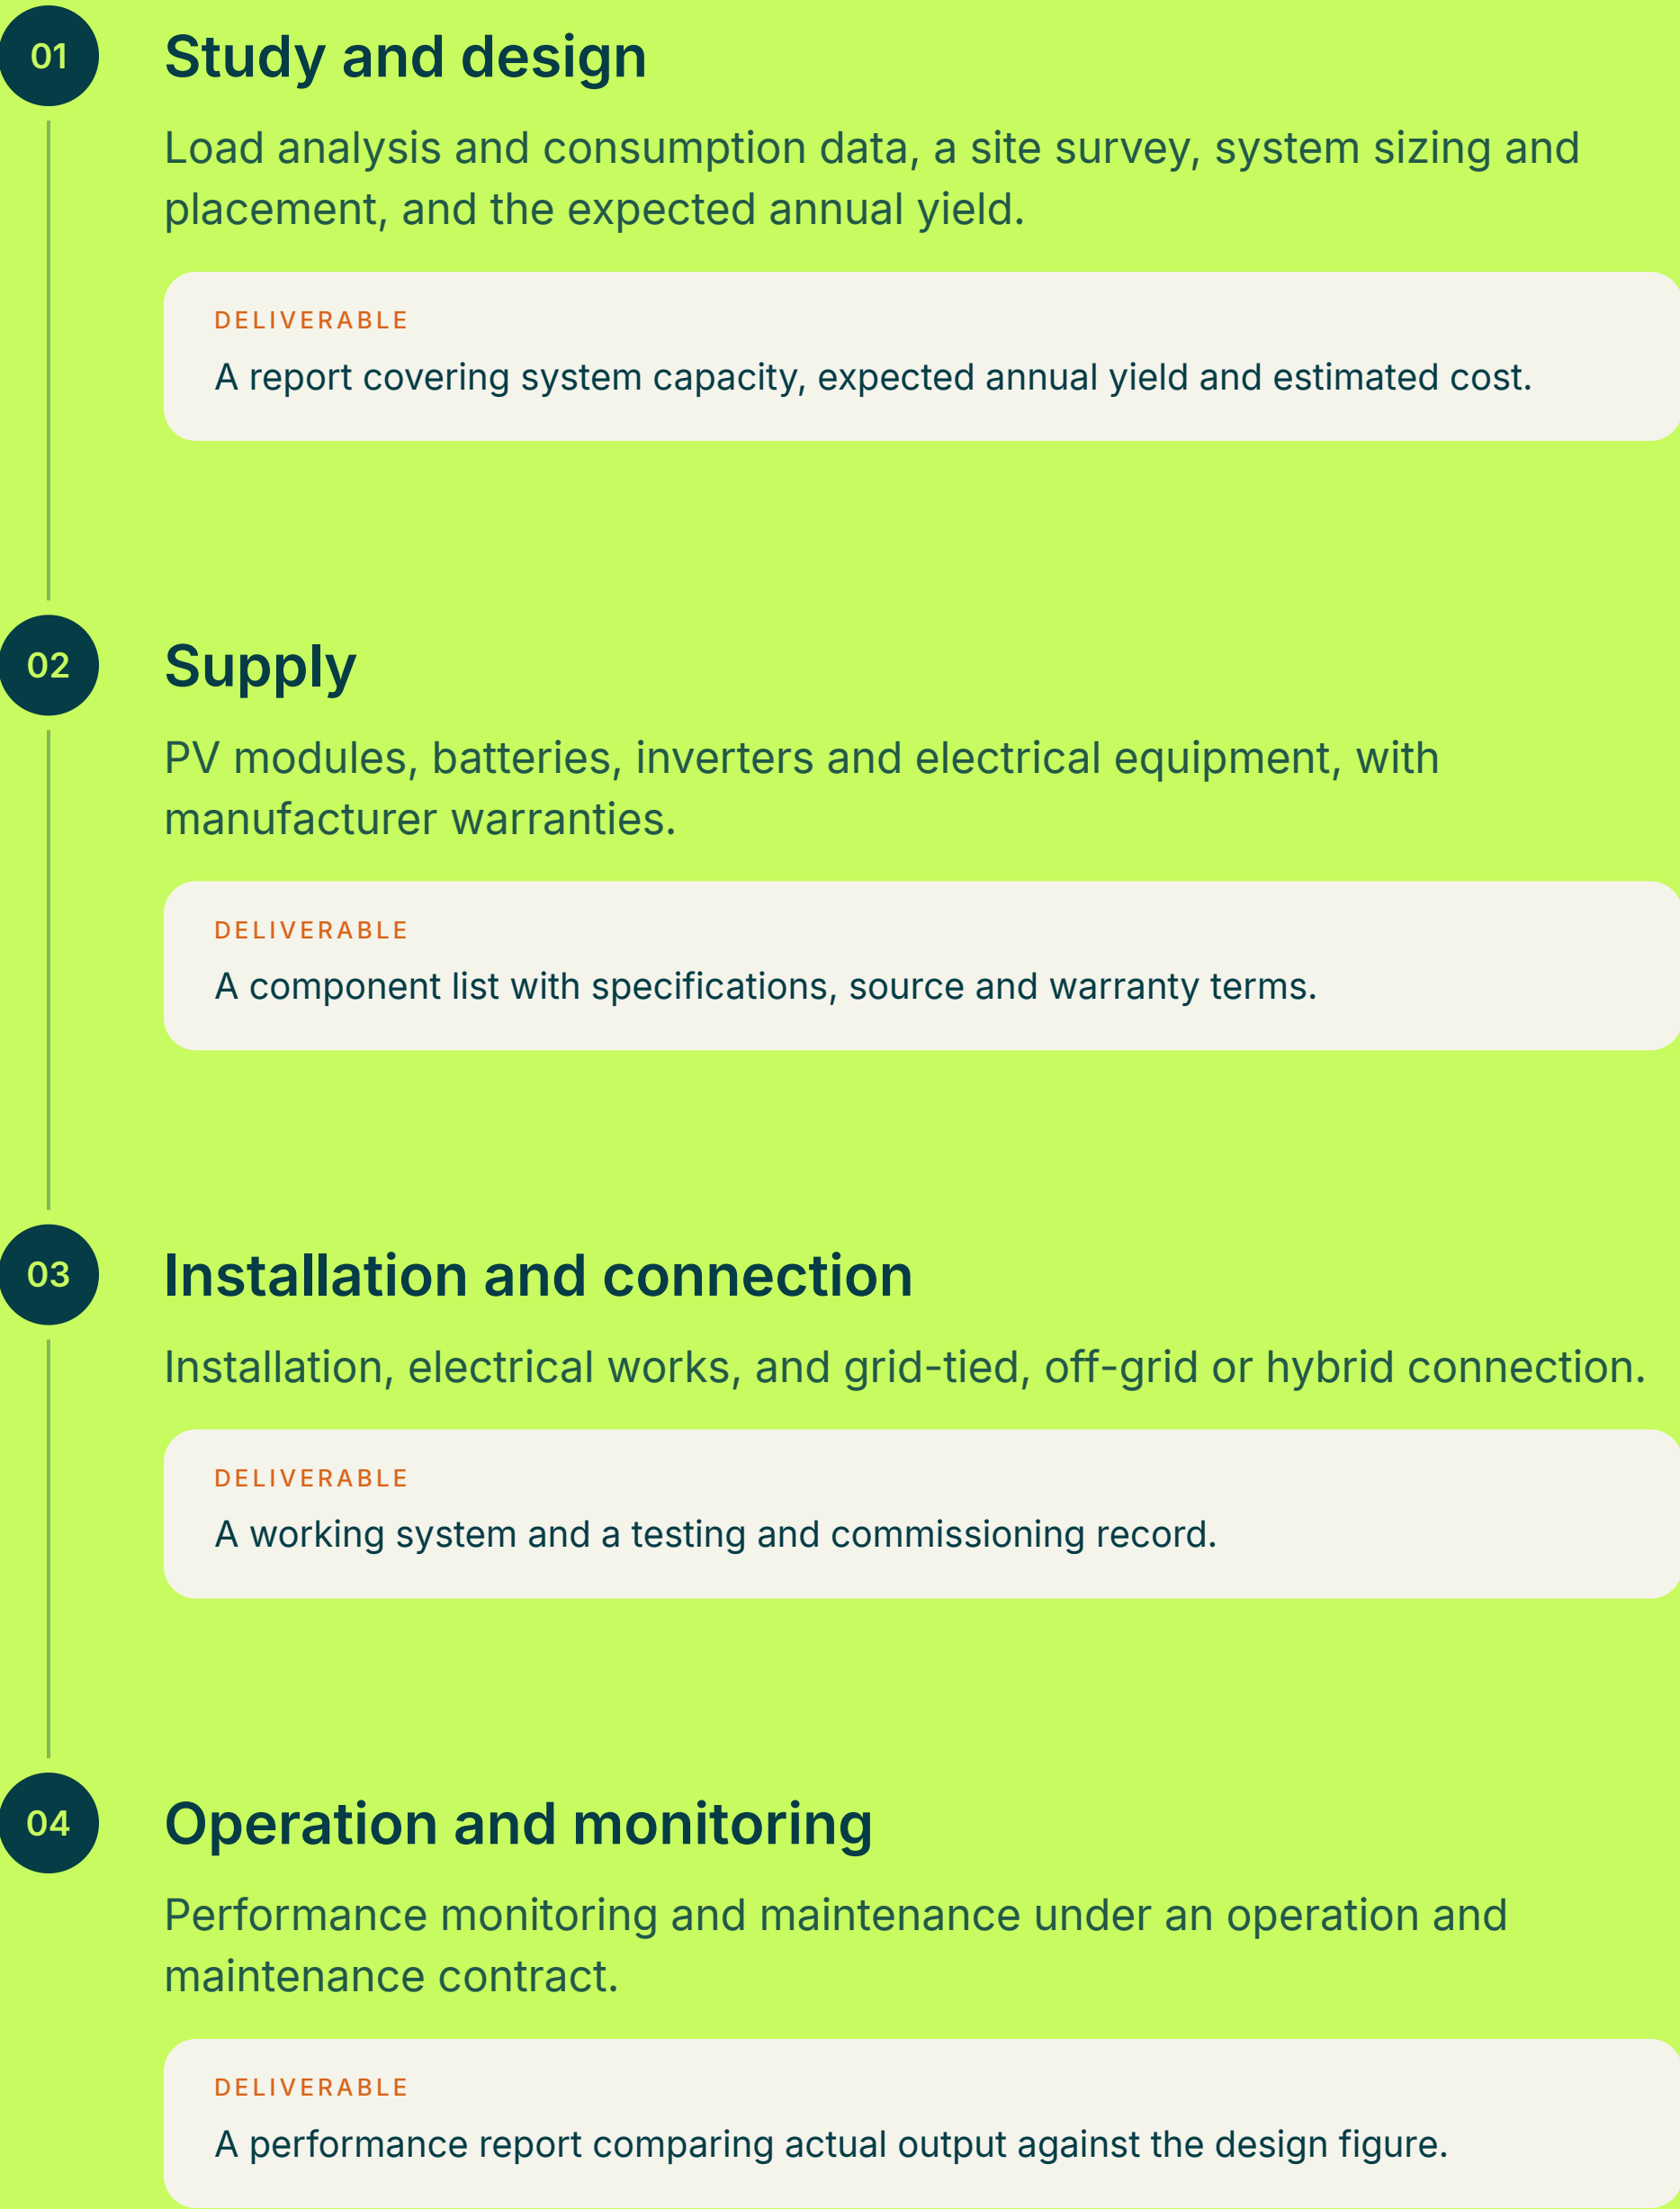

Plant infrastructure

Mounting structures, foundations, DC and AC cabling, and connection and protection panels, specified to suit the site.

Scope of work

The project sets the scope, from supply alone to full operation.

Ways of working

01

Supply and installation for projects

One party responsible for design, supply, installation and commissioning.

02

Component supply

Supply to the specification and quantities of the project, for contractors and installation companies.

Where the systems are used

The pattern of consumption shapes the system more than the type of business does.

Sites that consume during the day

Offices, retail centres, hotels, factories, schools and residential compounds. Their heaviest load falls within sunlight hours.

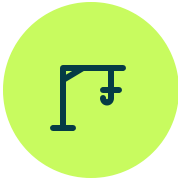

Sites with continuous loads

Hospitals, cold stores, production lines and data centres. The system works alongside the backup already in place, cutting generator running hours and fuel use.

Sites away from the grid

Farms, irrigation pumps, camps and work sites that run on diesel.

Projects under construction

Contractors and developers delivering the energy scope within a live project.

What AFAQ brings

- 01

Supply from a factory in Oman

AACE modules are manufactured in Oman, which shortens supply time compared with importing.

- 02

Warranty handled inside Oman

AFAQ processes module warranty claims locally, without sending them to a manufacturer abroad.

- 03

In-country value

Modules made in Oman support local content requirements in tenders and government projects.

- 04

Direct supply agreements

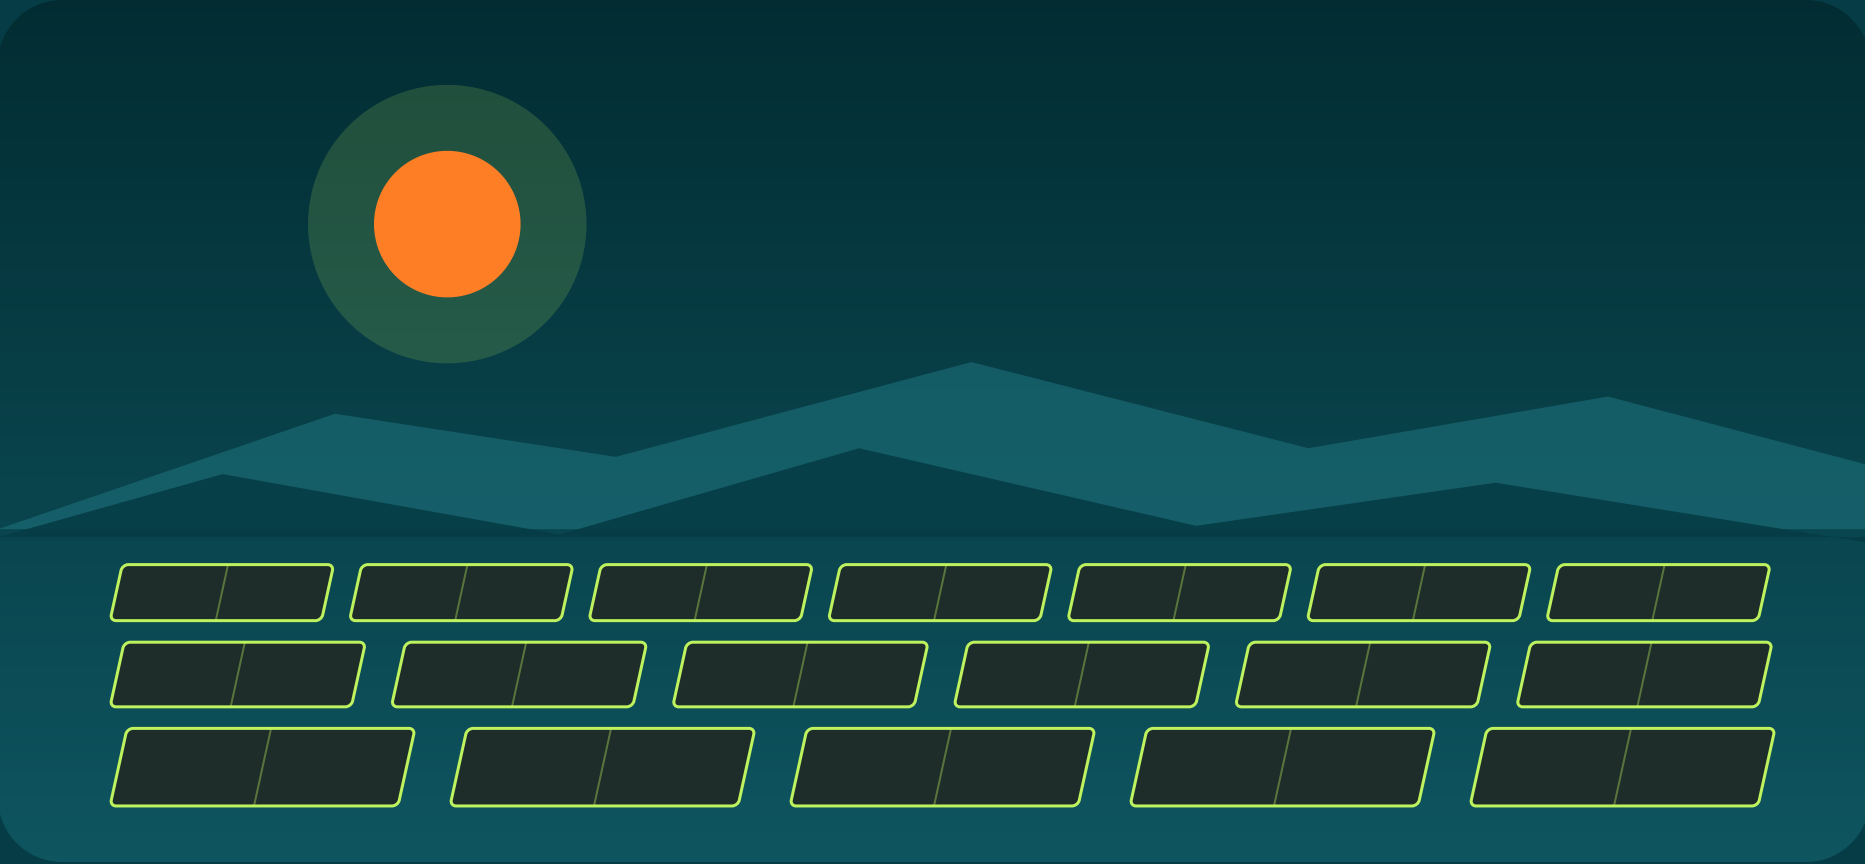

Written agreements with module, battery and inverter suppliers, covering availability and manufacturer warranties.

- 05

Delivery team

An engineering team for design and supervision, and a field crew for installation and commissioning.

Innovating today,
sustaining tomorrow.
