About AFAQ

AFAQ for Energy & Integrated Business is an Omani company based in Muscat. It works in solar power and energy storage solutions. We go with them.

The company designs photovoltaic systems, supplies their components, installs them and brings the systems to project plants.

AFAQ works directly with facility owners, and with contractors and developers inside their own project

About AFAQ

System components

A photovoltaic system is built from four components. AFAQ holds a direct supply agreement with a main supplier for each.

01 PV modules

Selected according to the mounting area available and the conditions on site.

Main suppliers

AACE · Ronma

02 Battery energy storage

Sized on the loads to be stored

Main supplier

Goshin

03 Inverters and power conversion

Selected according to the array configuration and the connection requirements of the grid operator.

Main supplier

Star Charge

04 Plant infrastruc

System components

Scope of work

The project sets the scope, from supply alone to full operation.

Study and design

Load analysis and consumption data, a site survey, system sizing and placement, and the expected annual y

Deliverable: a report covering system capacity, expected annual yield and estimated cost.

Supply

PV modules, batteries, inverters and electrical equipment, with manufacturer warranties.

Deliverable: a component list with specifications, source and warranty terms.

Installation and connection

Installation, electrical works, and grid-tied, off-grid or hybrid connection.

Deliverable: a working system and a testing and commissioning record.

Operation and monitoring

Performance monitoring and maintenance under an operation and maintenance contract.

Deliverable: a performance report comparing actual output against the design figure.

Scope of work

Ways of working

01 Supply and installation for projects

One party responsible for design, supply, installation and commissioning.

02 Component supply

Supply to the specification and quantities of the project, for contractors and installation companies.

Ways of working

Where the systems are used

The pattern of consumption shapes the system more than the type of business does.

Sites that consume during the day

Offices, retail centres, hotels, factories, schools and residential compounds. Their heaviest load falls within

Sites with continuous loads

Hospitals, cold stores, production lines and data centres. The system works alongside the backup already in

Sites away from the grid

Farms, irrigation pumps, camps and work sites that run on diesel.

Projects under construction

Contractors and developers delivering the energy scope within a live project.

Where the systems are used

What AFAQ brings

Supply from a factory in Oman

AACE modules are manufactured in Oman, which shortens supply time compared with importing.

Warranty handled inside Oman

AFAQ processes module warranty claims locally, without sending them to a manufacturer abroad.

In-country value

Modules made in Oman support local content requirements in tenders and government projects.

Direct supply agreements

Written agreements with module, battery and inverter suppliers, covering availability and manufacturer war

Delivery team

An engineering team for design and supervision, and a field crew for installation and commissioning.
